

How to install and use Broadsoft MobileLink(Android)

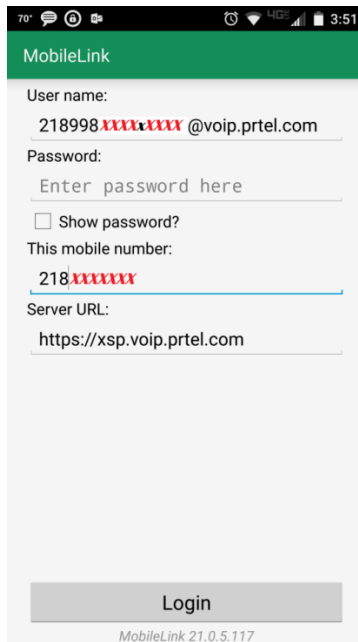

Installation

-download and install Broadsoft MobileLink from the app store

-The logo should look like this:

After the app is installed, login using your provided credentials.

User name: Enter the username provided (@voip.prtel.com must be included)

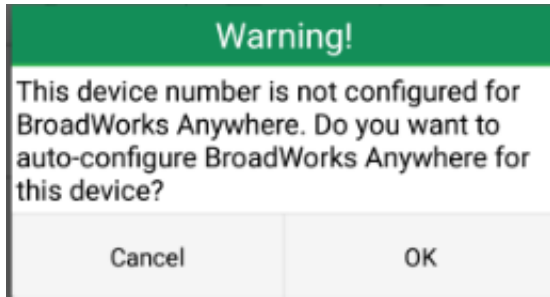

Password: Enter the password provided

This mobile number: Enter your 10-digit mobile number

Server URL: <https://xsp.voip.prtel.com>

Click the "Login" button

Upon first login you will see a warning prompt

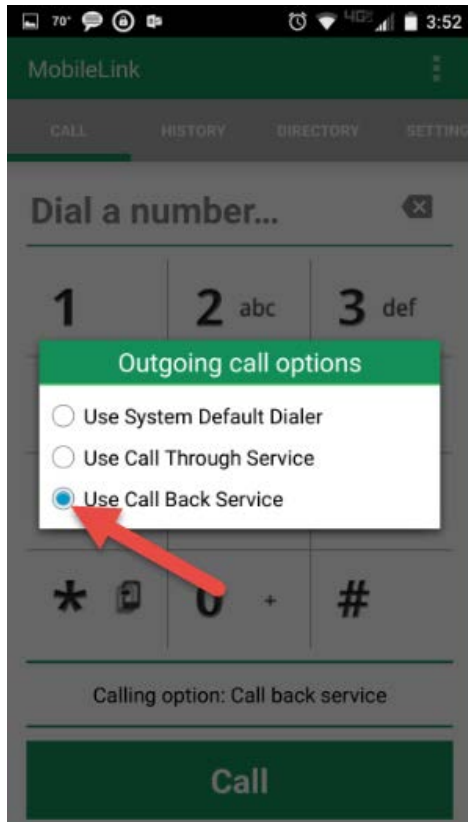

Click "OK", this adds your cell phone number to the system

Once logged into the app, there are many settings for control your business phone, etc..

Outgoing Call Options

Under the "CALL" tab, click on "Calling option"

This controls the outgoing call options, to make calls as if you're at your desk select "Use Call Back Service"

(When you make a call, your desk phone will actually call your cell phone, then when you answer it will complete the call to the desired party. This gives the appearance that you are calling from your desk phone. It also means the calls will show up in your call history on your desk phone, as well as viewable through the app.)

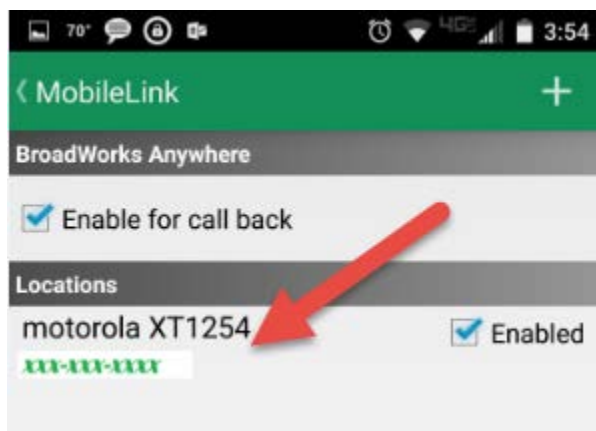

NOTE: Using the "System Default Dialer" will use your phone as normal, no extension dialing, etc..

NOTE: "Call Through Service" is not supported at this time.

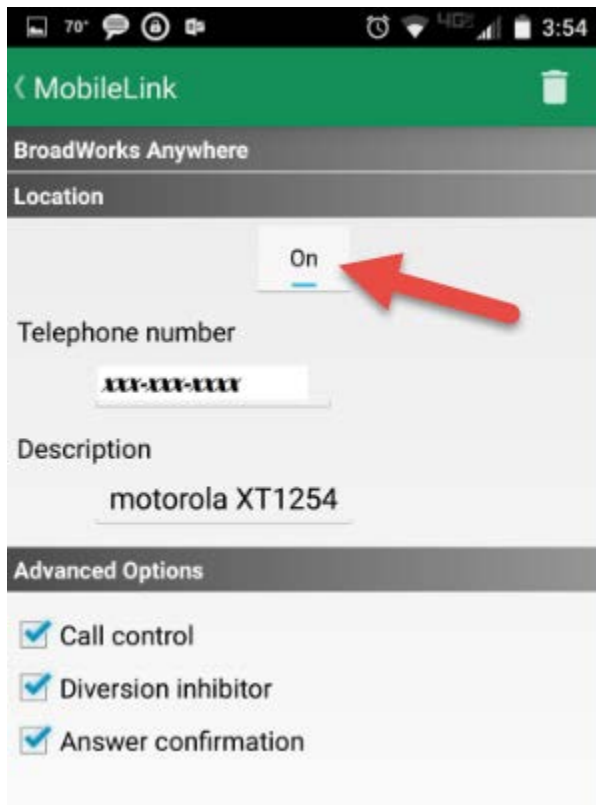

The most important feature to be familiar with is how to turn the Broadworks Anywhere on/off. This is what makes your cell phone ring at the same time as your desk phone.

1. Under the "SETTINGS" tab
2. Click "Call Control"
3. Click "Broadworks Anywhere"

Click where your device is listed

The service can be turned on/off from here. (When it is off, business calls won't ring on your cell phone)
